

Bond System Top

October 2016

Edge retention with resin bond

Always focusing on its customers' needs and on the continuous development of its products, CAFRO integrated its Bond System with the new resin bond family TOP.

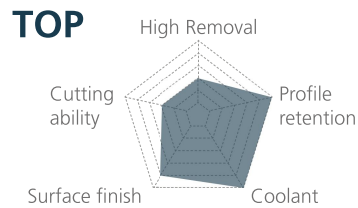

HARDNESS

CAFRO Bond System TOP

The main features of this new family – always split in four hardness grades, indicated with odd numbers for Diamond and even numbers for CBN – are the maximum edge retention for a resin bond and an excellent dissipation ability of the heat generated during grinding, to considerably reduce the wheels' power absorption.

DIAMOND	APPLICATION	CBN
TOP 7 TOP 5	Edge retention	TOP 8 TOP 6
TOP 3 TOP 1		TOP 4 TOP 2

A selection of wheels optimized with Cafro Bond System are available at stock for immediate delivery. Ask the Stocklist to your **CAFRO** contact or download it from www.cafro.com
