

CAFRO Bond System

Cafro Bond System is the innovative managing method of Cafro’s resin bonds: 4 bond families dedicated in a numeric scale - odd number for Diamond and even numbers for CBN - which defines quickly, easily and intuitively the optimized solution to your specific grinding operation.

PRO

Cafro Bond System’s family with the highest edge retention characteristics, always guaranteeing free cutting ability and silent cut.

CNC

Optimized for applications on CNC machines where high removal rate coupled with profile retention and low absorption are required.

UNI

A strong free cutting ability allows its use in a wide range of applications: ideal for example for large diameter wheels and centerless grindings.

DRY

Developed for dry grindings, thanks to its cold cutting ability it is suggested also for applications with large contact areas.

	DIAMOND	OPERATION	CBN	
 	PRO 7	Tenuta di spigolo	PRO 8
